

Configure ServiceApp on engima2 boxes

1. Install Magic-IPTV Script
2. Install Magic-IPTV ServiceApp Script
3. Check info on channel stream

```
wget -O serviceapp.sh "http://files.subportal.io/download/Scriptenigma/2018-06a/serviceapp.php"
&& chmod +x serviceapp.sh && ./serviceapp.sh
```

4. Configure ServiceApp

[menu, setup, Display and GUI, ServiceApp]

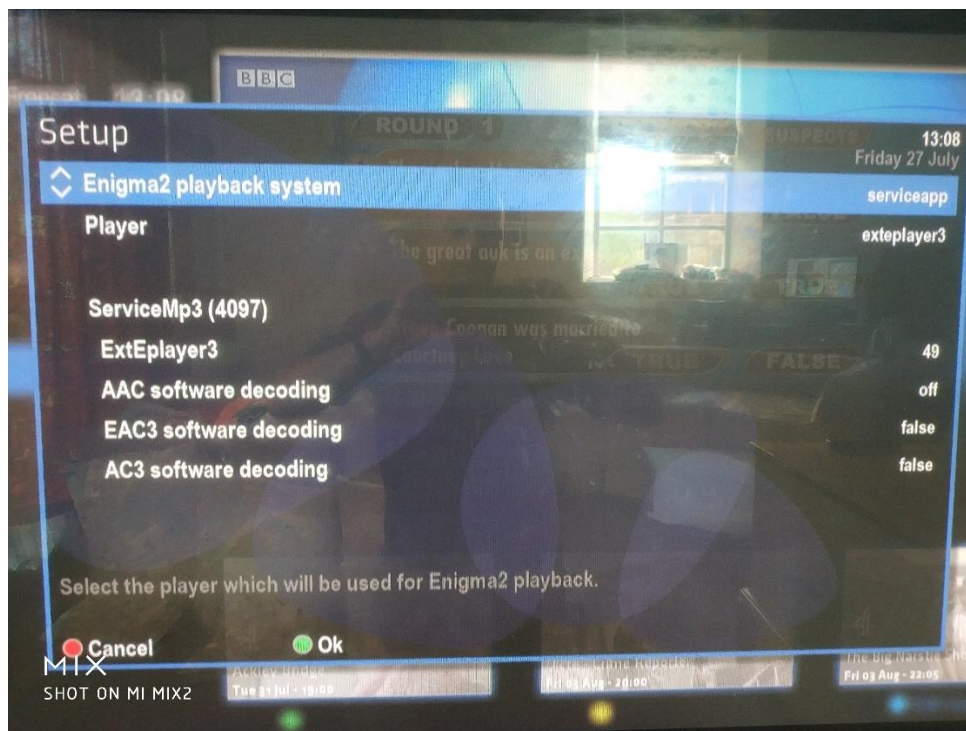

Figure 1ServiceApp

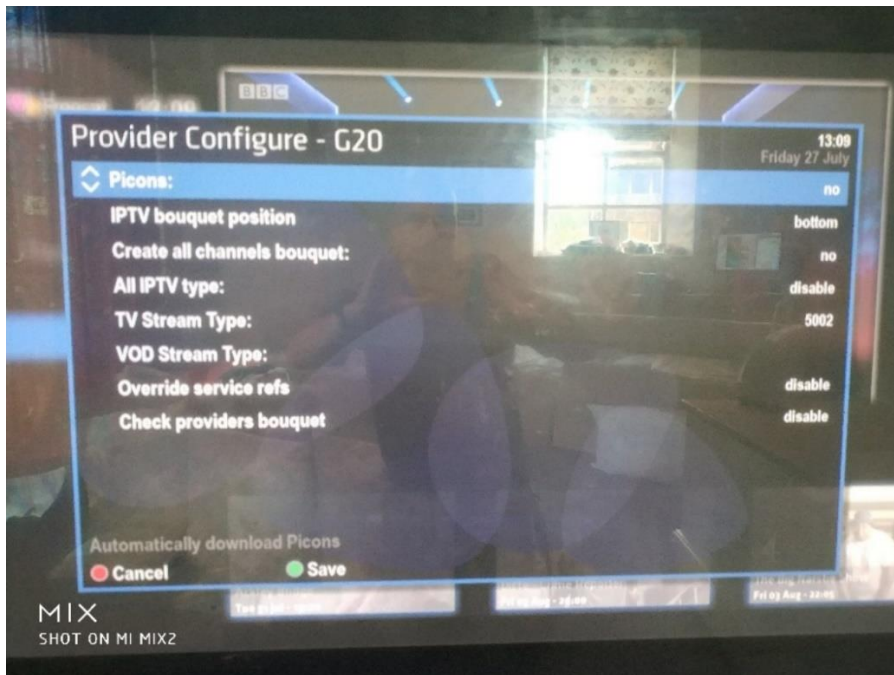

Make sure the playback system is **serviceapp** and player is **extplayer3**

Press Green for ok and to save

5. Reboot
6. Go to Plugins, and either IPTV Bouquet Maker OR Xtreme-editor, depending on what you initially installed

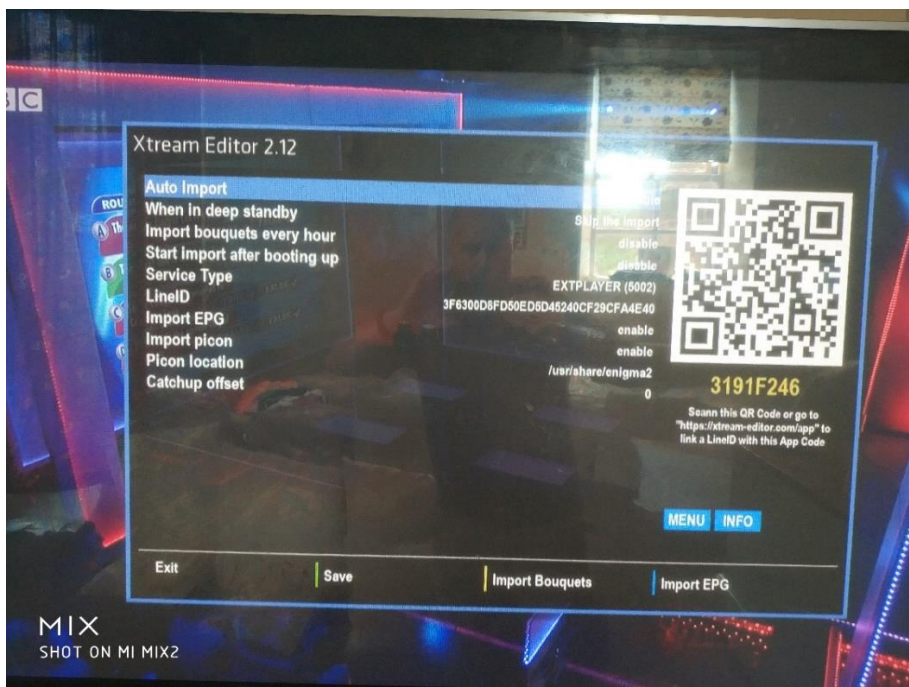

IPTV Bouquet Maker

Set TV Stream Type to 5002 (you may need to switch to expert mode, option on the first page) and press the Green button to save.

Xtreme-editor

Set the Service Type to EXTPLAYER (5002) and press the Green button to saveVERY

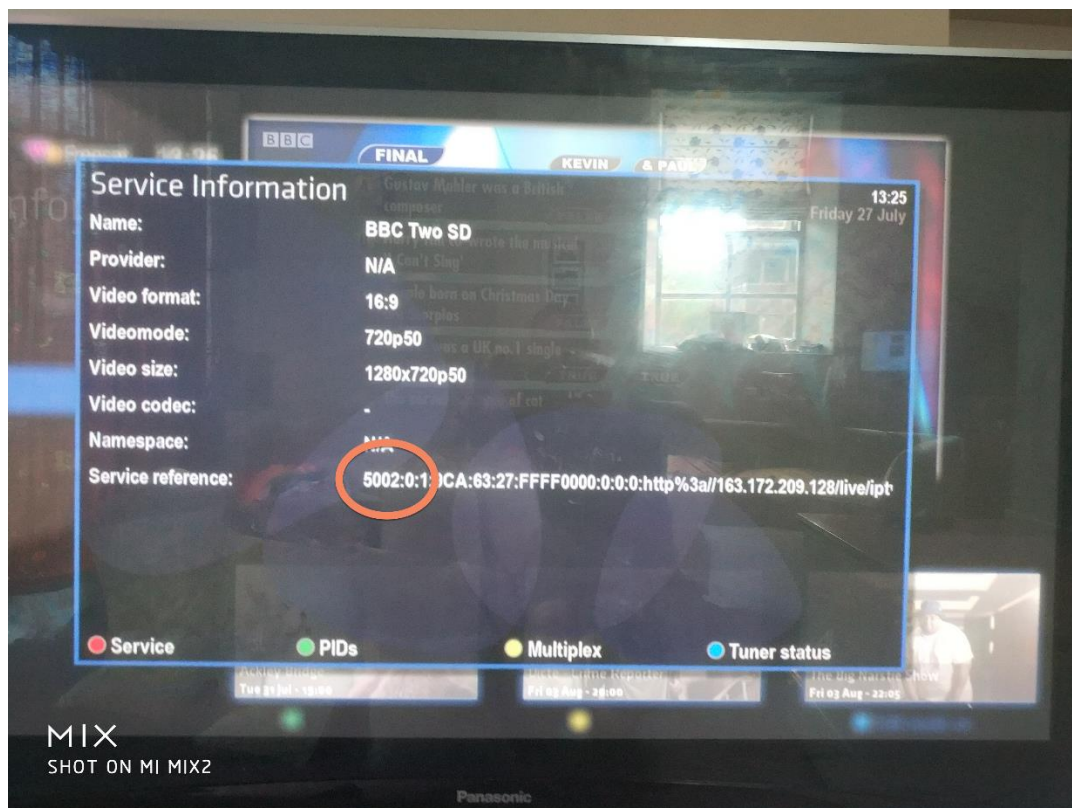

7. IMPORTANT: Re-populate the Bouquets
 - a. SubPortal Script: Go to **IPTV Bouquet Marker** plug-in and select **Run**

This will reload the streams to use the new 5002 extplayer setting.

REBOOT

8. Go to an IPTV Channel and test. You can double check that the stream is playing with the new 5002 setting by pressing menu, information, service

END
